The Job Search OS

in Claude Code

One 15-minute setup. After that, Claude orchestrates your job search every day — you spend minutes reviewing what lands, not hours on the grunt work. And because it knows your CV, your profile, and your targets, you can ask it for anything: a tailored CV, a re-pitched cover letter, a referral note.

THE PROBLEM

The grunt work crowds out the thinking.

Time pressure makes you cut corners. Generic cover letters. Roles you miss. Applications to jobs already filled. The thinking that actually lands interviews gets squeezed out.

WHAT IT DOES

Claude as your on-standby agent.

Runs the search, writes the letters, tracks the roles. Because it knows everything about you, just ask — a tailored CV, a custom pitch, a LinkedIn intro, whatever you need.

INSTALL

1. Download the Claude desktop app — claude.ai/download
2. Sign up for a **Claude Pro** plan if you don't already have one — Claude Code needs it.
3. Switch to **Code** mode in the Claude desktop app, and paste this message:

   "Can you please install the plugin from github.com/pradeep-sankaran-07/job-search-os and walk me through the setup?"

This creates a **job-search** folder in your `Documents` — Claude will drop your CV, profile, tracker, and cover letters inside it. You also need **Chrome** installed (that's what Claude uses to search LinkedIn).

THREE STEPS, ALL IN PLAIN ENGLISH

1 **Drop your CV + build your profile** in Code

In Claude Code, share your CV. Claude reads it, asks a short set of questions about what you're looking for (titles, locations, seniority, dealbreakers), and gives you a polished CV back along with a saved profile.

"Here's my CV — let's set up my job search. Polish it if needed, then ask me what you need to know."

2 Pick target companies in Chat

Whenever you're ready — doesn't have to be right after setup — ask Claude Code for a target-companies prompt. It fills in your profile and hands you a prompt to run in Claude **Chat**, which has a stronger *Research* mode.

> *"Please give me the prompt to build my target-company list."*

1. Switch to **Chat** mode in the Claude desktop app.
2. Turn on **Research** mode (toggle near the chat input).
3. Paste the prompt Claude Code gave you.
4. When Claude Chat returns the list, save it as **target-companies** in your `job-search` folder.
5. Switch back to **Code** mode.

3 Every day: open, pick, apply in Code

Each morning your Excel tracker is updated automatically — strong matches are scored and cover letters are drafted. Open the tracker, pick what you want to apply to, and update the Status column. Need a tweak, a custom CV, or a LinkedIn intro? Just ask Claude Code — it knows you.

WHAT ACTUALLY HAPPENS

Under the hood.

Once set up, Claude runs in the background every morning. Here's what the plugin does on your behalf — so you know exactly what to expect and where to intervene.

Your local folder	When you install the plugin, it creates a folder on your machine for everything: your CV, profile, target-company list, tracker, cover letters, and logs. Nothing leaves your computer.
Daily search — scheduled	Every morning, Claude automatically searches **LinkedIn**, **Indeed**, **Google**, and the career pages of your **target companies**. It dedupes and verifies every match in a real browser so dead links never reach you.
Excel tracker, auto-filled	Each role shows up with a short summary, fit rating (**Strong** or **Medium**), direct link, and a Status column you control.
Cover letters, pre-drafted	For every Strong match, a personalized first-draft cover letter is written in your voice, ready in your folder. Tweak or ask Claude to rewrite — whichever is faster.
Your daily move	Open the Excel. Pick what to apply to. Mark the Status: *Apply*, *Will not apply*, or *Not a real job* (for false positives). Claude learns from every choice.
On demand	Ask Claude for a tailored CV for one role, a re-pitched cover letter, a LinkedIn intro, or anything else. It knows your CV, your profile, and your targets — it doesn't need context.
Found one elsewhere?	Spotted a job opportunity somewhere outside the tracker — a tip from a friend, a LinkedIn post, an email? Drop the screenshot or link into Claude and ask it to process. It adds the role to the tracker, drafts a cover letter, and rates the fit — same flow as everything else.
