The Job Search OS

in Claude Code

One 15-minute setup. After that, Claude orchestrates your job search every day — you spend minutes reviewing what lands, not hours on the grunt work. And because it knows your CV, your profile, and your targets, you can ask it for anything: a tailored CV, a re-pitched cover letter, a referral note.

THE PROBLEM

The grunt work crowds out the thinking.

Time pressure makes you cut corners. Generic cover letters. Roles you miss. Applications to jobs already filled. The thinking that actually lands interviews gets squeezed out.

WHAT IT DOES

Claude as your on-standby agent.

Runs the search, writes the letters, tracks the roles. Because it knows everything about you, just ask — a tailored CV, a custom pitch, a LinkedIn intro, whatever you need.

INSTALL

1. Download the Claude desktop app **claude.ai/download**

2. Paste this message into Claude:

   "Can you please install the plugin from github.com/pradeep-sankaran-07/job-search-os and walk me through the setup?"

THREE STEPS, ALL IN PLAIN ENGLISH

1 **Drop your CV + build your profile**

Claude reads your CV, asks short questions about what you're looking for (titles, locations, seniority, dealbreakers), and gives you a polished CV back along with a saved profile.

> *"Here's my CV — let's set up my job search. Polish it if needed, then ask me what you need to know."*

2 **Pick target companies**

For this one step, switch to **Chat mode** in the Claude desktop app — Chat has a stronger *Research* mode for multi-source web research.

1. Switch to **Chat mode** in the Claude desktop app.
2. Turn on **Research** mode (toggle near the chat input).
3. Paste the prompt Claude Code gave you (your profile is already included).
4. Save the list as **target-companies** in your folder, then switch back to Code mode.

3 **Every day: open, pick, apply**

Each morning your Excel tracker is updated automatically — strong matches are scored and cover letters are drafted. Open the tracker, pick what you want to apply to, and update the Status column. Need a tweak, a custom CV, or a LinkedIn intro? Just ask Claude — it knows you.

WHAT ACTUALLY HAPPENS

Under the hood.

Once set up, Claude runs in the background every morning. Here's what the plugin does on your behalf — so you know exactly what to expect and where to intervene.

Your local folder

When you install the plugin, it creates a folder on your machine for everything: your CV, profile, target-company list, tracker, cover letters, and logs. Nothing leaves your computer.

Daily search — scheduled

Every morning, Claude automatically searches **LinkedIn**, **Indeed**, **Google**, and the career pages of your **target companies**. It dedupes and verifies every match in a real browser so dead links never reach you.

Excel tracker, auto-filled

Each role shows up with a short summary, fit rating (**Strong** or **Medium**), direct link, and a Status column you control.

Cover letters, pre-drafted

For every Strong match, a personalized first-draft cover letter is written in your voice, ready in your folder. Tweak or ask Claude to rewrite — whichever is faster.

Your daily move

Open the Excel. Pick what to apply to. Mark the Status: *Apply*, *Will not apply*, or *Not a real job* (for false positives). Claude learns from every choice.

On demand

Ask Claude for a tailored CV for one role, a re-pitched cover letter, a LinkedIn intro, or anything else. It knows your CV, your profile, and your targets — it doesn't need context.

Found one elsewhere?

Spotted a job opportunity somewhere outside the tracker — a tip from a friend, a LinkedIn post, an email? Drop the screenshot or link into Claude and ask it to process. It adds the role to the tracker, drafts a cover letter, and rates the fit — same flow as everything else.
