The Job Search OS

in Claude Code

One 15-minute setup. After that, Claude orchestrates your job search every day — you spend minutes reviewing what lands, not hours on the grunt work. And because it knows your CV, your profile, and your targets, you can ask it for anything: a tailored CV, a re-pitched cover letter, a referral note.

THE PROBLEM

Most of the search is grunt work.

Scanning sites, reading listings, judging fit, drafting cover letters — it eats the time you should be spending on the decisions only you can make: which roles to pursue, how to pitch yourself, who to reach out to.

WHAT IT DOES

Agents do the work. You orchestrate.

Agents scan the sites, score fit, draft cover letters in your voice, and keep the tracker current. You open the tracker each morning and apply judgment — which to apply to, what to tweak, who to chase.

INSTALL

1. Download the Claude desktop app — claude.ai/download
2. Sign up for a **Claude Pro** plan if you don't already have one — Claude Code needs it.
   Switch to **Code** mode in the Claude desktop app, and paste this message:
3. *"Can you please install the plugin from github.com/pradeep-sankaran-07/job-search-os and walk me through the setup?"*

This creates a **job-search** folder under your `Documents` — Claude will use it for your files. You also need **Chrome** installed.

THREE STEPS, ALL IN PLAIN ENGLISH

1 **Drop your CV + build your profile** (in Claude Code)

In Claude Code, share your CV. Claude reads it, asks a short set of questions about what you're looking for (titles, locations, seniority, dealbreakers), and gives you a polished CV back along with a saved profile.

"Here's my CV — let's set up my job search. Polish it if needed, then ask me what you need to know."

2 **Pick target companies** (in Claude Chat)

Ask Claude Code for the prompt, then paste it in Claude Chat — Chat has a stronger Research mode.

"Give me the prompt to find target companies in Claude Chat."

1. Switch to **Chat** mode in the Claude desktop app.
2. Turn on **Research** mode (toggle near the chat input).
3. Paste the prompt Claude Code gave you.
4. Save Claude Chat's response as **Target Companies.pdf** in your `job-search` folder (browser Print → Save as PDF works).
5. Switch back to **Code** mode.

3 **Every day: open, pick, apply** (in Claude Code)

Each morning your Excel tracker is updated automatically — strong matches are scored and cover letters are drafted. Open the tracker, pick what you want to apply to, and update the Status column. Need a tweak, a custom CV, or a LinkedIn intro? Just ask Claude Code — it knows you.

WHAT ACTUALLY HAPPENS

Under the hood.

Once set up, Claude runs in the background every morning. Here's what the plugin does on your behalf — so you know exactly what to expect and where to intervene.

Your local folder	The **job-search** folder under your `Documents` — your CV, profile, target-company list, tracker, cover letters, and logs all live here. Nothing leaves your computer.
Daily search — scheduled	Searches **LinkedIn**, **Finn.no**, **Indeed**, **Glassdoor**, and your **target companies'** career pages by default — you pick which to enable during install, and can add more later. Each match is verified in a real browser. Your computer needs to be on for the scheduled run; otherwise you can trigger it manually.
Excel tracker, auto-filled	Each role shows up with a short summary, fit rating (**Strong** or **Medium**), direct link, and a Status column you control.
Cover letters, pre-drafted	For every Strong match, a personalized first-draft cover letter is written in your voice, ready in your folder. Tweak or ask Claude to rewrite — whichever is faster.
Your daily move	Open the Excel. Pick what to apply to. Mark the Status: *Apply*, *Will not apply*, or *Not a real job* (for false positives). Claude learns from every choice.
On demand	Ask Claude for a tailored CV for one role, a re-pitched cover letter, a LinkedIn intro, or anything else. It knows your CV, your profile, and your targets — it doesn't need context.
Found one elsewhere?	Spotted a job opportunity somewhere outside the tracker — a tip from a friend, a LinkedIn post, an email? Drop the screenshot or link into Claude and ask it to process. It adds the role to the tracker, drafts a cover letter, and rates the fit — same flow as everything else.
